

KRISHNA JOSHI

Software Engineer, 7976309141, krishnajoshi177.in@gmail.com

Experience Summary

- Software Engineer skilled in Python, SQL, React.js, Node.js, Azure, REST APIs, MySQL/NoSQL, and cloud-based application development, with hands-on exposure to AI/Generative AI, Azure AI Services, GitHub Copilot, Microsoft Copilot, Prompt Engineering, LangChain, and RAG concepts. Experienced in building scalable web platforms, backend services, data pipelines, and AI-enabled solutions.

Skills Summary

- **Programming:** Python, Java, SQL
- **Cloud:** Azure Data Factory, Azure AI Services
- **Frontend:** React.js, HTML, CSS, JavaScript
- **Backend:** Node.js, REST APIs, .NET Core
- **Databases:** MySQL, NoSQL
- **AI / GenAI:** Azure AI, Prompt Engineering, Lang Chain, RAG Concepts, GitHub Copilot
- **Tools:** Git, GitHub, VS Code

Professional Certifications / Trainings

1. Completed **Microsoft Azure AI & AZ900** training, covering core Azure AI services and concepts.
2. Currently training in **Kubernetes** to build understanding of container orchestration, deployment workflows, and cloud-native application management.
3. Completed **Generative AI and GitHub Copilot** training to improve developer productivity.
4. Completed learning **.NET, C#, and GitHub Actions** to strengthen backend development, version control, and CI/CD automation skills.

Work Experience

LTIMindtree | Software Engineer

Nov 2025 – Present

- Working on cloud, data engineering, backend, and AI-driven solutions using Python, SQL, Azure, .NET, React.js, REST APIs, and Git-based development workflows.
- Contributing to application development, automation, cloud technologies, and Generative AI initiatives while continuously upskilling in Kubernetes, Azure AI, and modern software engineering practices.

Integrated Maritime Exchange (IME) | Software Engineer Intern / Software Engineer

May 2025 – Oct 2025

- Contributed to the development of a large-scale maritime platform supporting analytics, vessel intelligence, academic portals, and customer-facing digital solutions.
- Designed and developed full-stack features using React.js, Node.js, Python, MySQL, NoSQL, REST APIs, and Git, focusing on performance, scalability, and user experience across maritime products.

Projects

Project 1: C-Hub Maritime Platform & Market Analytics — Integrated Maritime Exchange (IME)

- Developed a scalable maritime data and analytics platform supporting 3,000+ ports and 100,000+ vessels with 24x7 uptime.
- Designed distributed backend and data layers using MySQL and NoSQL, improving system efficiency by approximately 70%.
- Built market analytics for real-time rate trends, daily movement tracking, and historical data analysis.
- Delivered customer-facing modules including maritime calculators and a mobile-first academic portal.
- **Technologies:** MySQL, NoSQL, JavaScript, React.js, Node.js, Python, Git

Project 2: Academic Portal & Maritime Calculators — Integrated Maritime Exchange (IME)

- Built an educational portal and responsive maritime calculators to improve customer self-service workflows.
- Created mobile-first UI/UX and reusable front-end components for calculators and learning modules.
- Implemented portal structure and content management flows for maritime student learning content.
- Integrated REST APIs and optimized page performance for always-on availability.
- **Technologies:** JavaScript, React.js, Node.js, Git, REST APIs

Project 3: Azure Data Migration & Automated Ingestion Pipeline

- Designed an Azure Data Factory-based data ingestion pipeline to automate movement of structured and unstructured data from Azure SQL and cloud storage into Azure Blob Storage.
- Created linked services to securely connect Azure SQL, cloud storage, and Azure Blob Storage.
- Defined datasets for structured and unstructured sources to support repeatable ingestion workflows.
- Configured Copy Activity and scheduled triggers to enable reliable automated data movement with minimal manual effort.
- **Technologies:** Azure Data Factory, Azure SQL, Azure Blob Storage, Cloud Storage, Copy Activity, Linked Services, Datasets, Triggers

Project 4: RAG-based Document Q&A Assistant using Azure OpenAI

- Built a GenAI-based document question-answering assistant to retrieve relevant context from uploaded documents and generate concise answers using Azure OpenAI and RAG concepts.
- Designed a retrieval workflow to process document content and provide context-aware responses.
- Applied prompt engineering to improve answer relevance, clarity, and consistency.
- Explored LangChain and RAG concepts for knowledge search, semantic retrieval, and document-based Q&A workflows.
- **Technologies:** Python, Azure OpenAI, Azure AI Services, LangChain, RAG Concepts, Prompt Engineering, GitHub Copilot

Educational Qualification

- | | | |
|--------------------------------|------------------------------------|------------------------------|
| • B. Tech, CSE | Graphic Era Hill University | Dehradun CGPA: 8.00 2025 |
| • Class 12, Non-Medical | Kendriya Vidyalaya Suratgarh Cantt | Rajasthan 91.8% 2021 |
| • Class 10 | Kendriya Vidyalaya Suratgarh Cantt | Rajasthan 91.8% 2019 |
